## Technical Data

### Contactors for Power Factor Correction LNG19

- LNG19 series changeover capacitor contactor is mainly applicable to a power line of AC 50Hz or 60Hz, rated working voltage up to 380V.
- It is used to put a low voltage parallel connected capacitor in operation or switch it off in a low voltage reactive power compensation device.
- The contactor is equipped with a surge suppressor, which can effectively reduce the surge current passing through the capacitor at switching on and suppress the over-voltage at switching off.
- The product is conformity with the standards IEC 60947-4-1
